The MR-24® roof system is a key component of The Butler Difference—a competitive advantage that has enabled Butler to remain the leader in the building systems industry for over 100 years. You’ll also find The Butler Difference in these details:

- High-performance products—such as acrylic-coated galvanized C/Z purlins and girts, the unique MR-24® seam that virtually eliminates roof leaks,
- Maximum Service Life—The MR-24® roof system has 40 years of documented in-place performance, and it lasts, on average, up to twice as long as conventional roofs.
- Trust the proven performance of the industry’s #1 standing-seam roof system.
- Butler-cote™ finish—Butler offers this superior full-strength Kynar 500® or Hylar® 5000 fluoropolymer finish system as the standard exterior finish on all painted panels and trim.
- 25-Year Warranty—it stands to reason that the industry’s best roof also offers the industry’s best warranty. The MR-24 roof system is available with a 25-year weathertightness warranty. Ask your Butler Builder® for details.

**MR-24® Roof System**

- Introduced in 1969
- More than 2 billion square feet installed worldwide
- Since the expected lifespan of most conventional roof systems
- Industry’s most specified standing-seam roof system
- Fully integrated roof penetrations and trims
- Meets rigorous testing standards of FM, UL, and ASTM, which may reduce insurance costs
- Available 25-year warranties for paint finish, perforation protection and weathertightness

**The MR-24® Roof System Experience the Butler Difference.**

PRecision engineeRing
Assures the Highest Quality Installation.

THE MR-24® roof system features factory-punched structural members and roof panels to assure a precisely aligned roof system. Precise alignment adds durability to the roof system and enables it to respond easily to daily and seasonal temperature changes.

SUSTAINABLE "GREEN" DESIGN
Comes in For Environmental Responsibility.
The MR-24 roof system is a material-efficient, recyclable, low-maintenance, and long-life roof solution with recorded life cycles of 40 years. "Green" attributes of the MR-24 roof system may also earn credits for LEED® certification. It's also available with a highly reflective solar color finish.

ENERGY EFFICIENT
High R-Value Options Are Available.
Roof insulation options up to R-40 are available with the MR-24 roof system. The system's panels move independently of the supporting structure, assuring no compromise or deterioration due to thermal cycling—a condition that often occurs within layers of conventional roofing materials.

facToRy puncHing
Assures Fast and Precise Installation.
All roof panels and structural members of the MR-24® roof system are factory punched for proper panel alignment, smooth expansion/contraction and weathertightness, as well as the accurate installation of closures, roof accessories, and trim.

INTEgRaTeD gaBLe TRiM
Designed for Thermal Expansion and Contraction.
Like virtually every other aspect of the MR-24 roof system, the gable trim is also designed to expand and contract with daily and seasonal temperature changes. It becomes an integral part of the roof system and improves performance and durability.

fLEXiBLe RiDge DeSign
Performance in Every Detail.
The MR-24 roof system ridge also moves to accommodate expansion and contraction. Our proven ridge design “caps off” the MR-24 roof system and the best-performing roof system available.

Staggered Panel Splices
Add Further Leak Protection.
Locating panel splices of adjacent panels in the same position across the roof creates a difficult detail to seal when the corners of four metal panels meet. The MR-24 roof system eliminates this by offsetting adjacent panel splices—interlocking adjacent panels virtually eliminates leaks and creates a superior lap detail.

STaggeReD paneL SpLiceS
Add Further Leak Protection.
Locating panel splices of adjacent panels in the same position across the roof creates a difficult detail to seal when the corners of four metal panels meet. The MR-24 roof system eliminates this by offsetting adjacent panel splices—interlocking adjacent panels virtually eliminates leaks and creates a superior lap detail.

WINd uPliFT ReSiSTance
Adds Protection and Peace of Mind.
The MR-24 roof system carries the highest UL wind uplift rating (Class 90). It also has been tested and approved by FM Global as a Class II Flex roof system. In addition, the MR-24 roof system is approved for use in hurricane zones such as Miami-Dade County, Florida.

WIND uPliFT ReSiSTance

Roof cLipS DeSiGneD To Move
The MR-24 clip allows the roof to expand and contract with changing temperatures. This mobility prevents stress at the clips, fasteners, and splices, which could otherwise cause the roof to buckle or leak.

SuPPoRTeD paneL enD SpLiceS
Reinforce Vulnerable Areas.
Splices are created when two roof panels must be joined together. Most manufacturers allow midair splices, resulting in stress under roof traffic or heavy snow. Butler eliminates this problem by locating splices directly over supporting steel.

THe piTTSBuRgH DouBLe-Lock SeaM
Creates a True Monolithic Weathertight Surface.
Only the MR-24 roof system uses the Pittsburgh double-lock seam with the final 180 degrees completed in the field with a portable seaming machine. Other manufacturers snap or crimp panels with a machine, producing a loose, vulnerable seam.

THE DIFFERENCE IS IN THE DETAILS OF THE MR-24® ROOF SYSTEM.

FACTORY PUNCHING
Maxes Roof and Precise Installation.
All roof panels and structural members of the MR-24® roof system are factory punched for proper panel alignment, smooth expansion/contraction and weathertightness, as well as the accurate installation of closures, roof accessories, and trim.

ROOF CLIPS DESIGNED TO MOVE
The MR-24 Gable Capillary Comb System.
The MR-24 clip allows the roof to expand and contract with changing temperatures. This mobility prevents stress at the clips, fasteners, and splices, which could otherwise cause the roof to buckle or leak.

SUPPORTED PANEL END SPLICES
Reinforce Vulnerable Areas.
Splices are created when two roof panels must be joined together. Most manufacturers allow mid-air splices, resulting in stress under roof traffic or heavy snow. Butler eliminates this problem by locating splices directly over supporting steel.

INTEGRATED GABLE TRIM
Designed for Thermal Expansion and Contraction.
Like virtually every other aspect of the MR-24 roof system, the gable trim is also designed to expand and contract with daily and seasonal temperature changes. It becomes an integral part of the roof system and improves performance and durability.

FLEXIBLE RIDGE DESIGN
Performance in Every Detail.
The MR-24 roof system ridge also moves to accommodate expansion and contraction. Our proven ridge design “caps off” the MR-24 roof system and the best-performing roof system available.
