

# INTELLIFARMS<sup>®</sup>

by INTELLIAIR<sup>™</sup>

*Intelligent solutions for today's farmers*

**PRODUCTS & PARTNERSHIP TO GROW YOUR MARGINS**

## DIFFERENT NAME. Same people. Same values.

To understand what we at IntelliFarms do, you first must understand who we are and where we're from. We're based in the small farming town of Archie, Mo., an hour south of Kansas City, surrounded by farmland. We like it that way. Our customers are our neighbors. And like them, we believe in the power of hard work, ingenuity and a pleasant attitude.

The innovative products we build and technology-based solutions we deliver are, behind the scenes, incredibly complex. But they deliver simplicity and ease to our customers. You see, to us, it's not about bells and whistles. It's about listening first, then designing solutions that truly meet our customers' needs. It's about innovations that matter and positively impact bottom lines. It's about providing the knowledge and information that empowers smart decisions. **It's about delivering real value and real profit back to America's farms. That is our mission. That is what drives us.**

Ten years ago, we saw a clear opportunity to provide improved precision-based technology to grain bin management by measuring in-grain moisture as well as temperature and use that data to automate fans and heaters. Today, our flagship product, BinManager®, is the industry's leading grain bin management solution and is

installed in bins across the nation and other parts of the world.

**But it's not in our genes to stop there.**

As we got to know our customers, we became aware of more of their unmet needs. We knew we could help.

From seed selection to marketing decisions and points in between, we're designing new technologies and tools to bring profitability to places and processes across the farm. They're products that compliment each other, build on each other and can even share data with one another. **That is why today, we are no longer calling ourselves IntelliAir, but instead IntelliFarms.**

Though our name has changed, all of our solutions are backed by the same service-oriented, values-driven people who have been here since we began. They're people you can trust.

IntelliFarms is on a journey as we expand our role on America's farms. And we're mapping our course based on the needs and desires of you, the customer. For that reason, we know it's going to be a good ride.

**We invite you to join us.**

# KNOW YOUR SEED

## EXPLORE RELIABLE, RANKED LISTS OF FIELD TRIAL PERFORMERS IN YOUR AREA

At IntelliFarms, we recognized that in order to bring complete grain management to the farm, we had to start with understanding the seed.

YieldFax is one of the nation's most complete databases on corn and soybean seed performance, combining all field trial data into one centralized place.

### SET YOUR PARAMETERS. GET CLEAR, UNBIASED DATA.

YieldFax was designed to simplify the seed selection process. Instead of having to dig through and compare field trial data from numerous places, YieldFax does it for you with its easy unbiased ranking tool. Simply set your filters for what you would like to examine, including soil type, maturity, pest resistance and many other criteria. You can also input your city and state and define the geographic radius you want to include in the results. Once the parameters have been set, YieldFax delivers a list of field trials meeting those criteria, ranked by performance. You can dive into individual trials and see the real data, giving you the insight you need to discuss with your seed suppliers and pick the best seed for your needs.

If you are not wanting a ranked list, you can filter the YieldFax database by variety to see how a specific seed brand and variety performs in your area. YieldFax is designed to give you quick insights and help inform one of the most important decisions of your year.

**YieldFax is available with a subscription to the IntelliFarms Portal (see page 21).**

The IntelliFarms Portal provides you access to this and other online tools designed to bring value and profit to your farm. Contact an IntelliFarms representative today to get started with the IntelliFarms Portal.

Set your filters and YieldFax will rank the field trial results that match your criteria.

More commodities coming soon!

# FIELD DATAMANAGER™

## REAL-TIME FIELD CONDITION DATA, RIGHT AT YOUR FINGERTIPS

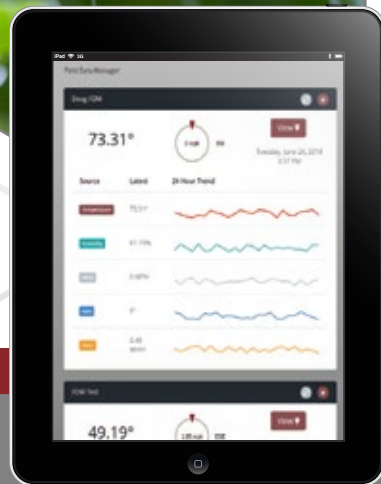

COMPREHENSIVE DATA TO INFORM PLANTING,  
IRRIGATION AND HARVESTING DECISIONS.

Imagine having up-to-the-minute data on conditions across your fields. That's the reality and power of the FieldDataManager. This new IntelliFarms product is designed with a comprehensive set of technologies to take the guesswork out of managing your field.

FieldDataManager takes real-time measurements of conditions both above and below ground to give you a full understanding of your field's conditions. And all of that data enables you to make informed decisions on best planting times, optimal harvesting times and when to spray and irrigate.

It is the only field condition monitor on the market that syncs all data back to an easy-to-access online interface. There you can get a quick, complete picture of what's happening in your fields.

**REAL-TIME DATA**  
TO ANY WEB ENABLED  
**SMARTPHONE, TABLET, OR COMPUTER**

FieldDataManager gives you the most complete look at your field's soil conditions with a custom amount of wireless probes spread over a radius of up to 2 miles, all reporting to you. **FieldDataManager and its wireless soil probe network were recognized with an ASABE AE50 Award in 2015.**

**FieldDataManager has the necessary features to collect the field data information you need:**

- Monitors and measures rainfall in your precise area within 1/100th of an inch.
- Determines growing degree units (GDUs) by measuring temperature, UV rays and precipitation.
- Provides wind speed, direction and gusts, barometric pressure and other real-time weather-data.
- Measures soil temperature and moisture and provides insight on the root depths that are extracting moisture from the soil.
- Allows up to 100 wireless soil probes to communicate back to one single FieldDataManager hub.
- Delivers real-time weather and soil probe data to any Smartphone, tablet or computer.
- Easily integrates data from spraying reports and pivot management, giving you the option to customize for your needs.

Access your FieldDataManager account through the IntelliFarms Portal.

**TWO MILE RADIUS**  
**ONE LONG-LIFE BATTERY**

# INTELLIPLANTS™

## PROVEN BIOLOGICALS APPLICATIONS TO GROW BIG YIELDS

### EXPERIENCE BIG GROWTH WITH INTELLIFARMS' PLANT HEALTH PRODUCTS

IntelliFarms is now partnered with a reputable producer of biologicals applications to bring big yield opportunities to today's farms.

#### What are biologicals?

Biologicals are living organisms that are bacterial or fungal in nature and are naturally-occurring in the soil. They boost a plant's health in a number of ways, similar to the way probiotics boost human health.

IntelliFarms Biologicals product boosts the health and yields of a number of crops, including corn, soy, wheat, barley, cotton, peanuts, sweet potatoes and many others.

### HIGH-YIELD SOYBEAN PROGRAM:

*A proven program to boost soybean yields*

Used in conjunction with traditional programs, IntelliFarms' biological solutions will reap rewards at harvest time. Our High-Yield Soybean Program is a three-step approach to foster strong, healthy plants throughout their growing cycle.

- 1) BigSoy100** – A foliar treatment applied at V3-V4
  - Increases proteins, vitamins and raises the Brix level in plants
  - Increases health, vigor and pod development
  - Increases desirable yield
- 2) BigBioYield + BigSoy100** – A foliar treatment applied at R1
  - Increases fruit set and crop quality
  - Increases nutrient levels
  - Improves resistance to biotic and abiotic stresses
  - Increase root growth and early plant development
  - Improves overall plant health
- 3) BigBioYield + BigSoy100 + fertilizer** – A foliar treatment applied at R3

### THE PROFITS SPEAK FOR THEMSELVES

IntelliFarms' biological products have demonstrated the ability to consistently improve soybean yields in farm trials, university research trials and on individual farms throughout the country.

The results are in - the products make a big difference, up to 20% higher yield.

Average of 20% higher yield with the use of BigBioYield and BigSoy100

#### THAT'S A PROFIT OF \$68.05 PER ACRE

Above Average Return - 10.75 Bushel | Sale Price - \$9.00/bu | Product Cost - \$28.70  
\* Price of application not included

# THE INDUSTRY'S LEADING GRAIN BIN MANAGEMENT SOLUTION

## NO LONGER RISK SPOILAGE OR OVER-DRYING IN YOUR GRAIN BINS

You invest too much in your crop to risk losing any of it during storage and drying. IntelliFarms' premier product, BinManager, intelligently monitors both the moisture content and the temperature inside your grain and in the outside air. This information automatically informs the system to run fans and heaters only when necessary in order to reduce loss, minimize energy costs and ensure the grain is properly stored and conditioned.

To top it off, BinManager allows you to see and manage what is happening in your bin from anywhere by accessing your secure online account from any Smartphone, tablet or computer. It will even send you alert notifications via email or text message if it senses any potential problems.

BinManager offers the unique ability to hydrate certain grains

### SOYBEAN RE-HYDRATION

BinManager is loaded with the features necessary to deliver predictability and profitability:

- Internet-based software allows you to manage multiple bins and multiple sites, so you always know the condition of your grain.
- The system will alert you to potential problems via text message or email, so you can act quickly.
- BinManager comes with a customized amount of 3G Plus cables for your needs
- Data from BinManager allows you to monitor and scrutinize temperature trends over time, helping you move product in and out efficiently.
- Each sensor in each cable measures both moisture and temperature, giving you a complete picture of your bin and allowing BinManager to pre-emptively address areas to address areas of higher moisture before they become hot spots.

For over eight years, farms across the United States and other parts of the world have experienced the BinManager difference.

"When I took the grain out of the bin and hauled it to the elevator, it was all within a half point from top to bottom and one-fourth point from my target moisture. I couldn't believe the energy savings!"

– John Krueger, soybean farmer

"It's the most efficient system that I've ever dreamed of that could put moisture back into soybeans. I think it's going to pay for itself extremely fast."

– Chuck Myers, soybean and corn farmer

**SAVING TIME AND MAKING MONEY WITH BINMANAGER**

**1 YEAR MONEY GAIN** ▶ \$5,078\*  
**5 YEAR ROI** ▶ \$15,990\*

\*Calculated using \$11/bu price and annual fan run cost of \$585 to \$1,028 (depending on fan size)

Now access your BinManager account through the IntelliFarms Portal. (See page 21 for details)

# WHERE SCIENCE

THE SCIENTIFIC PATH TO RELIABLE GRAIN MANAGEMENT

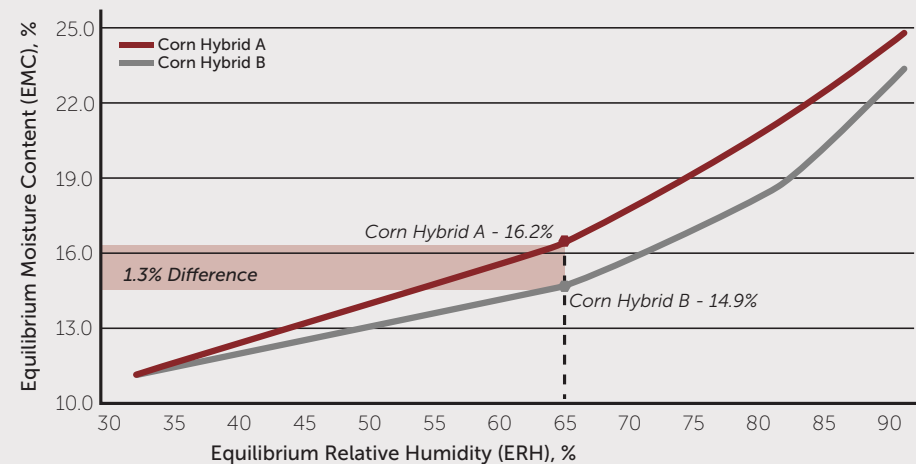

The engineers and inventors of BinManager knew that the system had to do more than just take readings. It had to be built with a keen understanding of the science of grain storage and drying in order to properly manage the process.

To demonstrate our commitment to the science behind grain management, IntelliFarms established IntelliFarms University in 2012. The University's Grain Lab evaluates different grain varieties and hybrids to determine uniqueness in drying behaviors and the equilibrium moisture content (EMC) of particular grains. This information allows IntelliFarms' sales and support team to guide customers to the right BinManager settings for their commodity.

When BinManager is programmed with this EMC data, it is set up for success to get the commodity conditioned to its targeted temperature and moisture even when the bin is filled with grain of various moisture contents (MC). BinManager automatically assesses these conditions and applies the appropriate type and amount of air at the appropriate time in order to dry down the top layers, while not over-drying the bottom layer.

The IntelliFarms University Grain Lab helps customers determine the unique EMC curve of their hybrid grain, setting their BinManager system up for success.

## VARIATIONS WITHIN CORN HYBRIDS

# MEETS SERVICE

DEDICATED SUPPORT STAFF TO HELP ACHIEVE STORAGE GOALS

Customer support is on-call around the clock for BinManager customers, but service starts before purchase:

- IntelliFarms Grain Specialists work with you to understand your drying and storage goals, and develop a customized plan to achieve them using BinManager technology.
- IntelliFarms sends its certified installers across the country to install the BinManager system(s) on our customers' bins and storage facilities, and they follow up for quality assurance.
- Once BinManager is installed, the IntelliFarms' team works with customers to set up their online BinManager account settings. This allows customers to view their real-time grain conditions and remain updated on the dry-down or hydration progress.
- Customer service representatives are on-call for customers' questions regarding performance and settings.

## MANAGE YOUR GRAIN FROM THE PALM OF YOUR HAND

No more climbing up the side of your bin to manually probe grain. Get accurate data about your stored grain with two feet firmly on the ground. BinCheck is a simple device that allows for on-site monitoring of both grain temperature and moisture in one of two ways:

- Bluetooth connectivity compatible with Android phones. Simply sync your Bluetooth on your phone with the BinCheck junction box, and you can view live readings of conditions simply displayed on the BinCheck app.
- A handheld panel can be plugged in to the junction box on the exterior of the bin and showcase live readings on the screen. The screen is even back-lit so you can easily check conditions at night.

With either approach, you quickly get the information you need to make decisions about when to turn on and off the fans and/or heaters to manage your stored grain.

### BinCheck is designed to deliver simplicity:

- Easy on-site access means there is no need to access a computer.
- Both Bluetooth and handheld options can read data from up to eight cables per bin and can be synched or plugged into multiple bins to get readings.
- The junction box easily mounts on the outside of the grain bin for easy walk-up access.
- Both options are powered by long-life batteries.

Handheld Unit

## UPGRADE TO DELUXE TO ACCESS GRAIN BIN DATA ONLINE

Not only does BinCheck Deluxe allow you to monitor your bins with both feet planted firmly on the ground; you can access your comprehensive grain bin data from the comfort of your home or office. With your BinCheck Deluxe online account, you have the vital information you need to confidently make decisions which optimize moisture content and protect your stored commodity.

### BinCheck Deluxe is designed to deliver flexibility:

- BinCheck Deluxe works on all web-enabled devices, including Smartphones and tablets, so you can check your grain conditions anytime from anywhere.
- The online interface provides real-time alerts and notifications, so you have the ability to quickly react if needed.
- The network allows multiple bins in an operation to communicate with one another wirelessly, so they do not have to be daisy-chained.

### It's easy to upgrade from BinCheck and BinCheck Deluxe to a full BinManager system.

In addition to providing comprehensive data about what's happening inside your bin, BinManager automatically runs the fans and heaters at appropriate times based on the in-bin, plenum and outside conditions. It's hands-off bin management for you.

# INTRODUCING THE 3G PLUS™ CABLE

## ALL TEMPERATURE, ALL MOISTURE, EVERY SENSOR

IntelliFarms' pioneered the cable industry with its patented 3G™ Moisture Cables over seven years ago. Today, new 3G Plus™ Cables allow every sensor of every cable to measure and report both moisture and temperature data, giving customers a complete look at grain conditions. The increased amount of data also allows the BinManager to pre-emptively manage areas of the grain with notably higher moisture before they become hotspots.

### The 3G Plus Cable is designed with durability and accuracy in mind:

- Cable entrances have watertight roof seals to keep out the elements.
- Cable materials are UV-rated for wear and tear
- Cables are accompanied by sturdy 2-rib or 4-rib brackets to minimize and distribute cable down-pull to the roof ribs – leading to the best down-pull rating in the industry.
- Digital sensors are accurate to 0.5% moisture and within 0.10 degrees Fahrenheit.
- Sensors are individually replaceable so there is no need to replace the entire cable .
- Cables are available in lengths of 6 feet to 105 feet, giving you the flexibility to select the right cables for your bin.
- IntelliFarms' installation team will help you install the cables in your bins, and all cables come with a comprehensive 2-year parts and labor warranty.

3G Plus Cables are compatible with BinManager®, BinCheck™ and BinCheckDeluxe systems, giving you the flexibility you need for your bin management operation.

**NEW CABLE CAPABILITIES COMING IN 2016!**  
*Theft detection & Inventory*

### Supplement your cable system with two other durable components:

- The Stiffened 2- or 4-Rib Bracket System helps to minimize cable down-pull to the roof ribs, and it meets down-pull requirements of bin companies.
- The Boot is the industry-leading, all-weather seal that keeps the elements outside the bin.

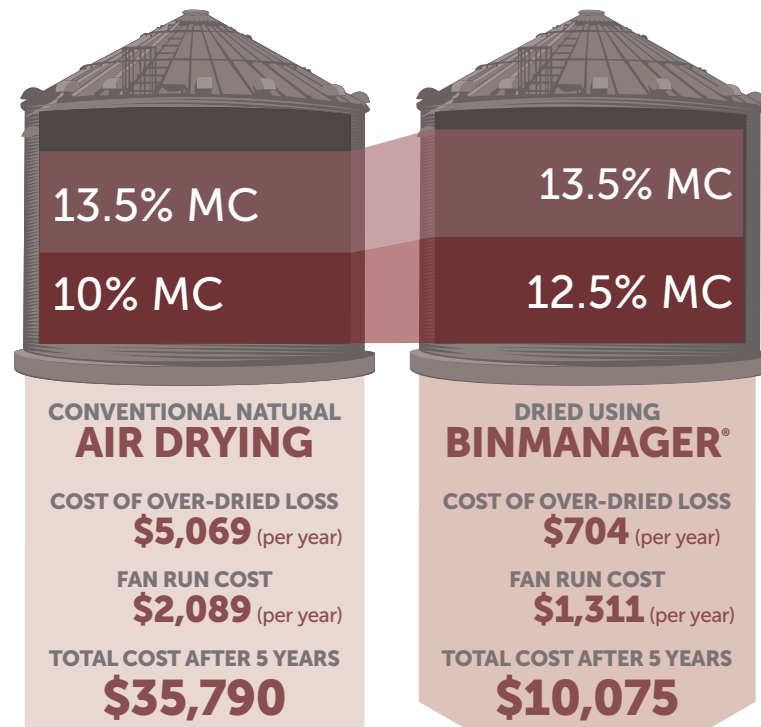

## MORE THAN JUST GRAIN

The foundations of BinManager are used and successfully applied to the drying, curing and/or storage of other types of specialty commodities. IntelliFarms has many success stories including popcorn, peanuts, pecans, pistachios, canola, sunflower seeds and even sweet potatoes.

### EXAMPLE POPCORN STORAGE

NOT INCLUDING DEDUCTIONS FOR QUALITY LOSS

**BIN SIZE:**

# 5 YEAR ROI

# \$15,715\*

"Now with BinManager, we've been taking sunflowers out at 9 1/2%. There's no worries with them at all. We've also ran the hydrate feature during some years when it got hot in the fall and the sunflowers got too dry on us. We've raised the them about 4 points of moisture in about 2 months. We were very surprised at how well BinManager did that and how little fan time it took to do it. After doing that test on two bins, we added it to three more bins after that. And we're going to keep going."

- Derek Rusch, Rusch Farms

## SHELLING OUT RETURNS FOR OUR CUSTOMERS

Specialty commodities like nuts have very specific drying and curing needs. IntelliFarms designs monitoring and management solutions that are specific to these industries, including PeanutManager, PecanManager and PistachioManager.

### PEANUTMANAGER CASE STUDY

The peanut drying process can be difficult and carries a lot of risk for quality deductions from cracking, splitting and over-drying. PeanutManager manages the process with sensor cables placed throughout the trailer, wagon or dome that measure the temperature and moisture of the nuts. The system is able to determine the moisture of both the hull and kernel and uses this data to automate the fans and heaters to dry the peanuts to target. Users can watch the progress by logging into their PeanutManager account on the IntelliFarms Portal.

With PeanutManager, our customers are delivering peanuts consistently within the 8%-10% moisture content range and capturing higher premiums.

IntelliFarms' PeanutManager customers have experienced the benefits of controlled drying, getting more uniform peanuts at the desired moisture content. Labor and energy savings are also by-products of the experience:

"We enjoy the automation of the system. It allows us to not have as many employees out there working on the trailers, saving us on labor and allowing our employees to focus on other things."

- Grady Herron, Tejas Peanuts

# CASHBIDMANAGER™

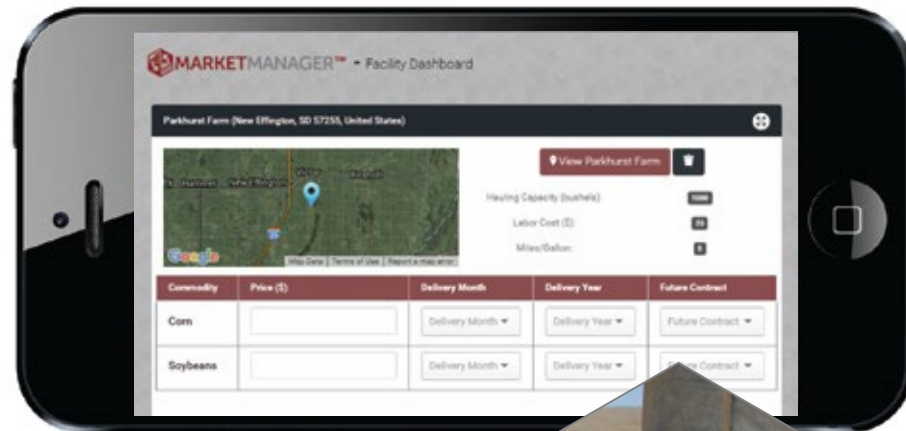

## REAL-TIME CASH BID DATA

TO GET THE MOST BANG FOR YOUR BUCK

When it's time to sell your grain, CashBidManager helps shine light on new market opportunities. This intuitive online tool will show you market opportunities up to a 200-mile radius from your location, and gives you the ability to monitor trends, compare prices and seize opportunities.

CashBidManager gives you the data you need for quick, profitable decisions:

- Cash bid prices are updated daily by grain merchandisers across the nation. You can view updated bids within a 200-mile radius of your location, opening you up to new market opportunities.
- You can factor in your cost of inputs and transportation per bushel and CashBidManager will display data in a way that lets you compare the closest markets with the most profitable markets in your area.
- You can indicate favored relationships in order to easily evaluate their current bids first.
- You can dive into historical trends within each market to help inform your selling decision.

# MARKETMANAGER™

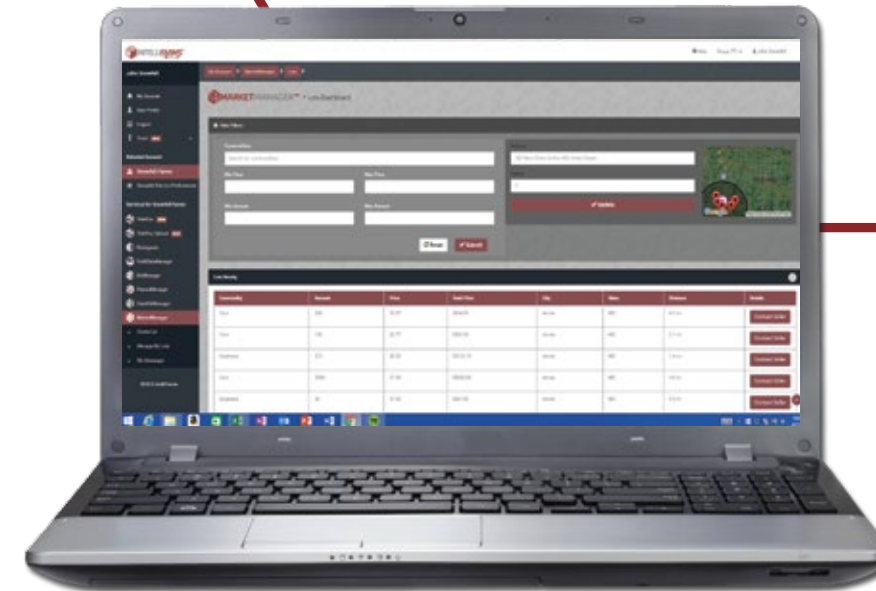

## EXPLORE SPECIALTY MARKET OPPORTUNITIES

TO GET THE MOST BANG FOR YOUR BUCK

**MarketManager is designed to help producers capitalize on the opportunities and profits within specialty markets.**

With MarketManager, you can view demands for specialty and food-grade commodities and post your own supply information. You can start up a dialogue with a buyer about what you are offering. Upon expressing interest in working together, you will be given the contact information to reach out to the buyer outside of the MarketManager tool, and continue the conversation further.

This easy-to-use tool is vetted to ensure buyers are reputable and that your data is secure.

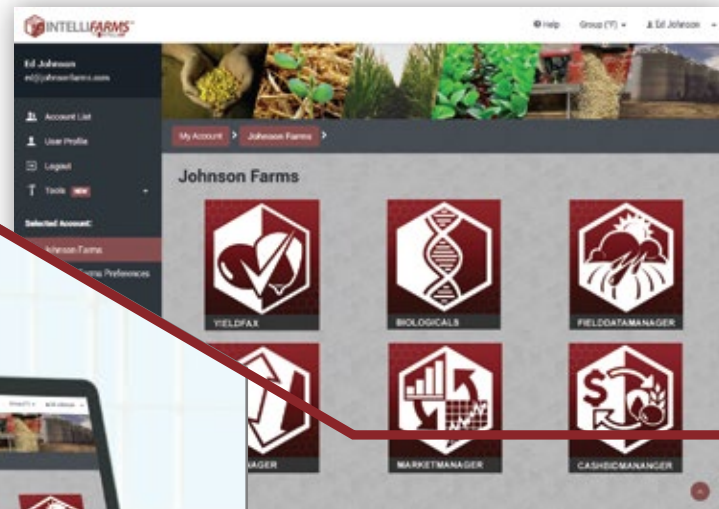

**Get unlimited access to your MarketManager and CashBidManager accounts through the IntelliFarms Portal.**  
(See page 21 for details)

## ACCESS ALL YOUR ONLINE ACCOUNTS IN ONE PLACE

Access all of your online monitoring tools for IntelliFarms products in one place with the IntelliFarms Portal. No more logging in and out of different sites - at the click of a button, you'll have the ability to hop from your BinManager and FieldDataManager accounts to your YieldFax, CashBidManager and MarketManager tools.

**And as IntelliFarms continues to build partnerships with other farm technology companies, they will have spaces within the Portal as well. The IntelliFarms Portal is designed to be your one-stop destination for farm technology tools.**

## GROW YOUR GRAIN MANAGEMENT KNOWLEDGE AT INTELLIFARMS UNIVERSITY

To demonstrate our commitment to the science and study of grain and commodity storage management, IntelliFarms founded IntelliFarms University in 2012. The University team conducts ongoing research on best practices of grain storage management and determines the optimal drying and moisture conditions for many different varieties and hybrids of grain and other commodities.

IntelliFarms University hosts a Grain School course the first Thursday and Friday of every month at the IntelliFarms headquarters in Archie, Mo. The course is designed to empower attendees with knowledge on how to optimize their grain storage practices. The courses cover:

- The science behind drying and hydration
- The economic benefits of optimal grain management
- How to use IntelliFarms' technology-based solutions to better manage your grain and other practices across the farm

### Interested in attending IntelliFarms University Grain School?

# HEAR WHAT OUR SATISFIED CUSTOMERS HAVE TO SAY

We serve customers across 35 states and in 5 foreign nations. And our presence is growing every day. The satisfaction of each and every one of our customers is important to us. Hear what some have to say about their experience with IntelliFarms and our products.

"My dealer suggested I look at BinManager. We gave them the size of the bin and shared our concerns about the protection of the rice in the bin, which has significant value. Once we installed it, it has turned out to be exactly as advertised. It's peace of mind. Knowing that our large bin, where 25% of our rice is stored, is safe."

- Tom Knowles, rice farmer

"We're getting the grain at the desired moisture level we want, and we end up with a more marketable product. We're getting maximum weight and not getting docked on moisture. It's one of the best investments we've made in our operation. It's a no-brainer way of managing grain."

- Billie Danner, corn farmer

"If someone was thinking about buying a grain management system, I would recommend IntelliFarms. The reliability of equipment has been excellent. The service and backing up of product by IntelliFarms management and employees have been excellent. I've been very satisfied. It's made a big improvement to our farm and in our grain management. The technology is great, and the company with the support they give is outstanding. We've increased the quality of our grains and nuts, but also saved electricity and propane in the drying process. It's given our operation a production advantage."

- Lanair Worsham, pecan farmer

"The people at BinManager and IntelliFarms have been great to us. We've come to them with any issue we've had or questions like 'I don't understand what this is doing.' Every problem has been fixed while I've been on the phone with our representative. We've actually even asked them for advice about what to do in certain situations and weather. And they've given us advice to prepare our grain the best."

- Andrew Hoelscher, wheat farmer

## INTELLIFARMS IS HONORED TO BE ONE OF THE NATION'S FASTEST GROWING COMPANIES

**"OUR PEOPLE DRIVE OUR GROWTH"**

-Todd Sears, President
